

*Advisory Team of the Year - New Jersey & Most Advanced Security System - USA*

REMTC.S offers disruptive technology designed to provide the most advanced cyber security protection available in the industry. Protection is customized to each organizations current operating pattern while possessing the adaptive capability to respond to future threats not yet launched. We spoke to them on why the REMTC.S problem solution is game changing.

Company: REMTC.S, Inc.  
 Name: Richard Malinowski  
 Email: rmalinowski@remtcs-secure.com  
 Web Address: www.remtcs.com  
 Address: 331 Newman Springs Rd,  
 Building III, Suite 311  
 Red Bank, NJ 07701  
 Telephone: +1 732-834-0088

REMTC.S has been in operation for more than 20 years, servicing the IT and management consulting needs of the most widely known financial services firms, defense contractors, biotech and pharmaceutical manufacturers. Throughout that time, we have amassed expertise in the areas of supercomputing, artificial intelligence, and information security through our automated trading products and compliance consulting services.

We realized that if we combined and focused these areas of expertise in an different way, that we could also be a leader in changing the direction of cybersecurity towards that which it desperately needs to go; intelligent automation. For the last eight years, we have focused our resources to that end; developing products that detect and mitigate threats faster than our adversaries can create and deploy them.

The company's product flagship organizational information security product offering, ProActive Security System, or PASS, utilizes ANNI to secure information networks, devices, and data. In the cyber domain where the environment is rampant with uncertainty and high variability, REMTC.S also reinforces services with secure vehicular platforms, automatically spawning and redirecting malicious traffic to virtualized networks in the event of a DDoS or other network based attack and resurrecting the entire network back to full operation within minutes. Several of the products and relevant solutions are all based upon the core engine, ANNI and replicate neural speed computing and human-like cognitive learning.

The exclusive features of REMTC.S' products and solutions are protection against known and unknown malware or malicious code and microsecond response time. Other features include diagnostics, evidentiary reporting, data loss protection, network and host intrusion prevention and detection. Our products are unequalled in speed and efficiency. Additionally, professional services, such as vulnerability studies are performed by REMTC.S personnel which will reinforce organizational justification for the need to move in revolutionary system solution direction are available.

We ensure that our clients do not remain outnumbered and outgunned in terms of cyber security. There is a consistent high level risk of digital attack. Many adversaries are utilizing a multi-level, business crime syndicate model to develop exploitation methods and some are using hordes of humans with the objective to infiltrate critical infrastructure, defense contractors and commercial entities for the purposes of intellectual property theft and to gain political and economic leverage.

REMTC.S, a Red Bank, NJ based company has been in operation for more than two decades, servicing the needs of the most widely known firms and organizations. Throughout that time, the company has amassed expertise in the areas of supercomputing, artificial intelligence (A.I.), and information security through their automated trading products and compliance consulting services.
